

ABSTRACT OF THE DISCLOSURE

A protector for vehicles' door openings with hingedly mounted doors to cover an adjacent area and protect is from rain and snow. The protector includes at least one frustro-conical roller member with a rollable sheet. The rollable sheet has two straight lateral ends and two curved lateral ends. means for removably mounting said second lateral end to the upper end of said door so that when said door is swung open said rollable sheet is unrolled substantially covering the area adjacent to said door's opening. Each frustro-conical roller member includes spring bias assembly for urging the rolling back of the rollable sheet after being rolled out. When at least two roller members and at least two rollable sheets are contiguous, the rollable sheets include means for releasably joining the contiguous curved lateral ends.
